

Abstract

Security Mesh Panel

5 The present invention relates to a security panel (1), for
example for use in a security barrier, and to a method of
forming the security panel. The security panel (1), comprises
an expanded metal mesh (2), the mesh having apertures (9)
therethrough bounded by a plurality of sides (11), at least
10 one of said apertures (9) having at least one side (11) to
which is affixed a separate barbed structure (4), the barbed
structure having at least one barb (14) extending in a plane
of the panel (1) in towards another side (11) of said
aperture (9).
